Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

**Office Action Summary**

Application No.

09/772,621

Applicant(s)

WENDEL RUP, HEINO

Examiner

Sharad Rampuria

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 21 February 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2617

### DETAILED ACTION

I. The Art Unit location of this application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 2617.

II. The current office-action is in response to the remarks filed on 02/21/2007.

Accordingly, Claims 1-11 are pending for further examination as follows:

### *Claim Rejections - 35 USC § 102*

III. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-11 are rejected under 35 U.S.C. 102 (e) as being anticipated by **Irvin**  
(WO 9944380 A1).

As per claim 1, **Irvin** teaches:

A module for controlling an electronic device (Abstract, 20; Fig.1, Pg.6; 11-17)  
comprising:

Art Unit: 2617

A device controller having a plurality of selectable operating modes, the operating modes defining respective sets of operating parameters for functions of the electronic device, (32; Fig.1, Pg.6; 17-Pg.7; 16)

A voice detection submodule (34; Fig.1, Pg.6; 17-Pg.7; 16) coupled to the device controller, the submodule comprising:

An input circuit for receiving a voice signal and converting the voice signal into an electrical signal; (34; Fig.1, Pg.6; 17-Pg.7; 16) and

A digital signal processor coupled to the input circuit; (54; Fig.1, Pg.7; 22-Pg.8; 8)

A multi-bus for conveying electrical signals; (connections between devices; Fig.1)

A device data storage coupled via the multi-bus to the voice detection sub-module and to the device controller, the device data storage adapted to store a library of voice tags of at least one user of the device; (24; Fig.1, Pg.9; 4-10)

Wherein the voice detection sub-module is operable to compare an input voice signal with the library of stored voice tags stored in the device data storage, (24c; Fig.2, Pg.9; 11-18)

Wherein the device controller is adapted to output a control signal to the electronic device on the basis of the comparison by the voice detection submodule, (Pg.9; 19-Pg.10; 16)

Wherein each operating mode of the electronic device has an associated library of stored voice tags for use by the voice detection sub-module when the operating mode concerned is selected; wherein the stored voice tags comprise profile data correlated to different operating modes; whereupon the selection of a certain operating mode of the electronic device, the device controller is adapted-to transfer to the sub-module memory a subset of the reference voice tags from the library of stored reference voice tags in accordance with the operating mode selected

Art Unit: 2617

(i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16).

As per claim 2, **Irvin** teaches:

A module for controlling an electronic device (32; Fig.1, Pg.6; 17-Pg.7; 16)

At least a device controller (32; Fig.1, Pg.6; 17-Pg.7; 16), a digital signal processor; (54; Fig.1, Pg.7; 22-Pg.8; 8) and a memory for storing a plurality of selectable operating modes, (24; Fig.1, Pg.9; 4-10) each operating modes defining a set of operating parameters for functions of the electronic device, (24c; Fig.2, Pg.9; 11-18)

The DSP having at least one voice activation function responsive to an input voice signal (34; Fig.1, Pg.6; 17-Pg.7; 16) and

The memory being adapted to store reference voice tags by at least one user of the device. (24c; Fig.2, Pg.9; 11-18)

Wherein the reference voice tags are stored in groups, each of which relates to a specific operating mode of the device. (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16).

As per claim 3, **Irvin** teaches:

The module for controlling an electronic device according to claim 1 or 2, wherein the electronic device is a mobile telephone and having a voice activated dialing function for dialing called numbers in response to a voice input from a user, the groups of reference voice tags

Art Unit: 2617

including references to intended called numbers. (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16).

As per claim 4, **Irvin** teaches:

The module for controlling an electronic device according to claim 1 or 2, wherein the electronic device is a mobile telephone and being a mobile telephone, and wherein the reference voice signals relate to specific functions of the telephone. (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16)

As per claim 5, **Irvin** teaches:

The module for controlling an electronic device according to claim 1 or 2, wherein the electronic device is a mobile telephone and, being a mobile telephone, wherein at least one operating mode is defined by at least one user of the telephone, the reference signal group associated with that operating mode also being defined by the user. (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16)

As per claim 6, **Irvin** teaches:

A method of operating an electronic device (32; Fig.1, Pg.6; 17-Pg.7; 16) which has a plurality of operating modes for defining operating parameters of the device, and which has at least one voice activated function, (34; Fig.1, Pg.6; 17-Pg.7; 16)

Storing reference voice signals in groups; (24c; Fig.2, Pg.9; 11-18)

Art Unit: 2617

Associating the said groups with respective operating modes of the electronic device.

(24c; Fig.2, Pg.9; 11-18)

Using an associated group of reference signals for voice signal matching in a chosen operating mode, (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16)

As per claim 7, **Irvin** teaches:

A method as claimed in claim 6, wherein the device is a mobile telephone. (20; Fig.1; Pg.12; 12-15, Pg.6; 11-17)

As per claim 8, **Irvin** teaches:

A method as claimed in claim 7, wherein each operating mode defines a respective list of voice references to potential dialed numbers, the voice references being compared with an input voice signal to determine the number to be dialed by the telephone. (Pg.10; 5-23)

As per claim 9, **Irvin** teaches:

The module for controlling an electronic device according to claim 1, further comprising the device data storage adapted to store a plurality of Libraries of voice tags, wherein each Library comprises a plurality of voice tags associated with a plurality of operating modes of the electronic device. (i.e. memory stored the different operational-profiles, which is tailored based upon user's profile; Pg.9; 19-Pg.10; 16)

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Irvin** in view of **Finke-Anlauff** [US 5479476].

As per claims 10-11, **Irvin** disclose all the particulars of the claim except at least one of the plurality of operating modes of the electronic device being selected from the group consisting of normal, meeting, in-car, outdoors, portable hands free, country time period and home. However, **Finke-Anlauff** teaches in an analogous art that the module for controlling an electronic device according to claim 9, further comprising at least one of the plurality of operating modes of the electronic device being selected from the group consisting of normal, meeting, in-car, outdoors, portable hands free, country time period and home. (Col.3; 57-Col.4; 12, Col.5; 3-67) Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify **Irvin** including at least one of the plurality of operating modes of the electronic device being selected from the group consisting of normal, meeting, in-car, outdoors, portable hands free, country time period and home in order to provide a mobile telephone has a plurality of user adjustable operating characteristics, such as the volume of an output signal, the ringing volume, and the generation of tones.

***Response to Remarks***

IV. Applicant's arguments filed on 02/21/2007 have been fully considered but they are not persuasive.

***Relating to Claim 1:***

Since **IRVIN** teaches, "If, however, the proffered signature matches one of the reference signatures 84 (box 140), the corresponding pointer 86 is read (box 160). The pointer 86 points to a location 92 within the nonvolatile memory 24c where the operational profile 94 may be found that corresponds to the now matched reference signature 84. By means of the pointer, the telephone recalls from nonvolatile memory 24c the operational profile 94 associated with the signature (box 170) (and therefore associated with the identity of the user) and configures itself accordingly (box 180). Thereafter, the normal operation of the telephone is enabled (box 190) and the process is exited (box 199)." (Irvin, Pg. 11; 17-Pg.12; 1), which *corresponds* to the claimed limitation as "the device controller is adapted-to transfer to the sub-module memory a subset of the reference voice tags from the library of stored reference voice tags in accordance with the operating mode selected." Thus, determining an operating mode of the device based on the profile, (Irvin, Pg. 11; 17-Pg.12; 1), is exactly as applicant is rely upon, determining an operating mode based on the voice-tag profile. (Wendelrup, US 20010011028, ¶ 0016), that certainly, anticipated by **IRVIN**. Hence, it is believed that ***IRVIN still teaches the claimed limitations.***

The above arguments also recites for the claims 2, 6, consequently the response is the same explanation as set forth above with regard to claim 1.

Because the remaining claims depend directly/indirectly, from one of the independent claims discussed above, consequently the response is the same explanation as set forth above.

With the intention of that explanation, it is believed and as enlighten above, the refutation are sustained.

### ***Conclusion***

V. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

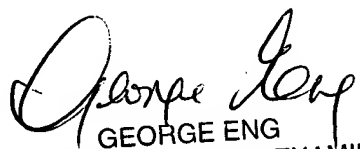

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sharad Rampuria whose telephone number is (571) 272-7870. The examiner can normally be reached on M-F. (8:30-5 EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on (571) 272-7495. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
